

# iMovie Tutorial

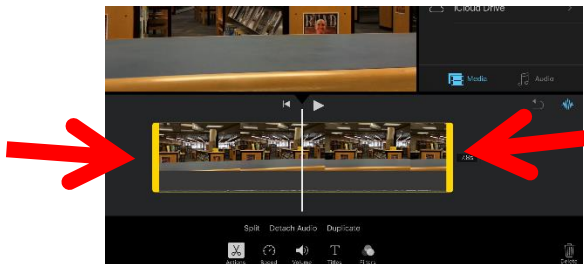

- 1) Click the “+” icon, and select “Movie”.
- 2) Tap the desired video/picture to edit, and press “Create Movie” at the bottom.

- 3) The video will open with the playback screen up top and the editing area below.

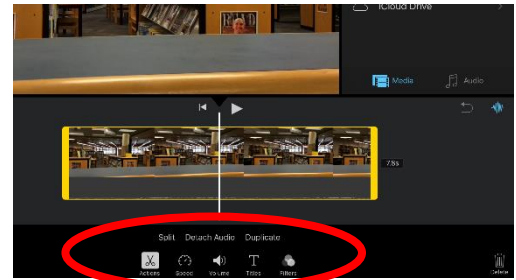

- 4) Tap on the bottom video to open editing tools.

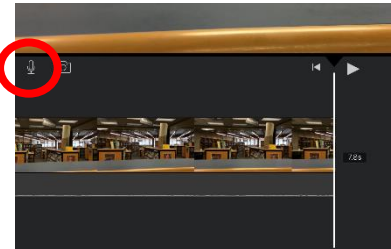

- a. Move the yellow bars to trim beginning and/or end of the video.
- b. Video will play from the location of the white, vertical bar.

- 5) Advanced editing tools

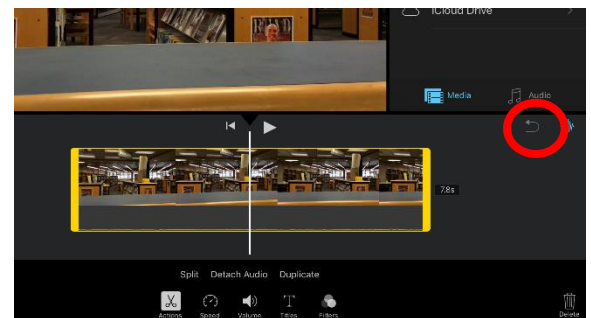

- a. **Actions** splits the video, **detaches audio**, and **duplicates**
- b. **Speed** adjusts the speed of the video and adds a **freeze** frame
- c. **Volume** adjusts the volume level of the video.
- d. **Titles** adds captions. (Split the main video where the caption needs to end.)
- e. **Filters** changes the look of the video.

- 6) The microphone icon allows the user to add narration.

- 7) The U-shaped arrow will undo an edit.

- 8) Press “Done” in the upper left corner to save finished video.
